CONTENTS OF VOLUME 135

NUMBER 1, NOVEMBER 1983

Review: Analysis of Gene Expression Using Simian Virus 40 Vectors	<i>Suresh Subramani and Peter J. Southern</i>	1
Activity Stain for Pyruvate Decarboxylase in Polyacrylamide Gels	<i>Hartmut Zehender, Dorothea Trescher, and Johannes Ullrich</i>	16
The Quantitation of G- and F-Actin in Cultured Cells	<i>Craig S. Heacock and James R. Bamburg</i>	22
Selective Purification of the 20,000-Da Light Chains of Smooth Muscle Myosin	<i>David R. Hathaway and Joe R. Haeberle</i>	37
Silver Staining of Histones in Triton-Acid-Urea Gels	<i>David E. Mold, Jon Weingart, Joel Assaraf, Dennis B. Lubahn, Drew N. Kelner, Barbara Ramsay Shaw, and Kenneth S. McCarty, Sr.</i>	44
A Method for the Ligation of DNA following Isolation from Low Melting Temperature Agarose	<i>D. M. Burns and I. R. Beacham</i>	48
Separation of Both Fibrous and Globular Proteins on the Basis of Molecular Weight Using High-Performance Size Exclusion Chromatography	<i>Julian A. Barden</i>	52
Determination of Tissue Plasminogen Activator by an Enzyme-Immunoassay Method	<i>O. Matsuo, K. Kato, C. Matsuo, and T. Matsuo</i>	58
A Ribonuclease Assay: Separation of Product from Undegraded Aminoacyl-Transfer RNA Substrate	<i>Cheng Chi Lee, Clive N. A. Trotman, and Warren P. Tate</i>	64
Evaluation of Immobilized Boronates for Studies of Adenine and Pyridine Nucleotide Metabolism	<i>Rafael Alvarez-Gonzalez, Hector Juarez-Salinas, Elaine L. Jacobson, and Myron K. Jacobson</i>	69
Determination of Intracellular Choline Levels by an Enzymatic Assay	<i>Michael K. Hise and Charles M. Mansbach II</i>	78
Direct Spectrophotometric Detection of Cation Flux in Membrane Vesicles: Stopped-Flow Measurements of Acetylcholine-Receptor-Mediated Ion Flux	<i>Jeffrey W. Karpen, Alan B. Sachs, Derek J. Cash, Elena B. Pasquale, and George P. Hess</i>	83
Decreased Protein Staining after Chemical Crosslinking	<i>I. M. Leffak</i>	95
A Batchwise Purification Procedure of Neurofilament Proteins	<i>S. Tokutake, S. B. Hutchison, J. S. Pachter, and R. K. H. Liem</i>	102
A Simple Electronic Capillary Microviscometer	<i>Francisco J. Müller and Julio C. Pita</i>	106
How to Prevent Losses of Protein by Adsorption to Glass and Plastic	<i>C. H. Suelter and M. DeLuca</i>	112
A Modified High-Performance Thin-Layer Plate for the Separation of Purines and Pyrimidines	<i>W. Jost and H. E. Hauck</i>	120
An Electrophoretic Method for the Identification of Poly- γ -glutamyl Chain Lengths in Folates and Related Compounds	<i>Jorge Zorzopulos, Benjamin Raj, and Lloyd M. Kozloff</i>	128
Assay of <i>N</i> -Acetylheparosan Deacetylase with a Capsular Polysaccharide from <i>Escherichia coli</i> K5 as Substrate	<i>Juan Luis Navia, Johan Riesenfeld, Willie F. Vann, Ulf Lindahl, and Lennart Rodén</i>	134

Bioluminescent Assay of Femtomole Levels of Estrone and Estradiol	
<i>J. C. Nicolas, A. M. Boussioux, A. M. Boularan, B. Descomps, and A. Crastes de Paulet</i>	141
A Sensitive Cyclic Nucleotide Phosphodiesterase Assay for Transient Enzyme Kinetics	
<i>Michiel M. Van Lookeren Campagne and Peter J. M. Van Haastert</i>	146
Incorporation of Acylated Wheat Germ Agglutinin into Liposomes	
<i>Sharon Carpenter-Green and Leaf Huang</i>	151
Quantification without Purification of Blood and Tissue Adenosine by Radioimmunoassay	
<i>Reinhard Bredehorst, Klaus Wielckens, Ernst-Wolfram Kupper, Werner Schnabel, and Helmuth Hilz</i>	156
Quantitative Determination of 5-Methylcytosine in DNA by Reverse-Phase High-Performance Liquid Chromatography	
<i>Dirk Eick, Hans-Joachim Fritz, and Walter Doerfler</i>	165
Molecular Weight of Human High-Molecular-Weight Kininogen Light Chain by Equilibrium Sedimentation in an Air-Driven Ultracentrifuge	
<i>Paul E. Bock and Herbert R. Halvorson</i>	172
Comparison of Rat Blood Preparation Methods for Acetaldehyde Assay	
<i>Philippe La Droitte, Yves Lamboeuf, and Georges de Saint Blanquat</i>	180
Determination of Copper Concentration in Blood Plasma and in Ocular and Cerebrospinal Fluids Using Graphite Furnace Atomic Absorption Spectroscopy	
<i>M. Christine McGahan and Laszlo Z. Bito</i>	186
A Novel Technique for Efficient Multiple Sample Dialysis	
<i>Paul K. Farmer, Jean M. Tyler, Paul A. Long, Patricia G. Kent, and Max E. Stachura</i>	193
Rapid Preparation of a Relatively Stable, Partially Purified Lipoprotein Lipase from Perfused Rat Heart	
<i>Louise Brissette and Simon-Pierre Noël</i>	197
Studies of UDP-Glucuronosyltransferase Activity toward Eugenol, Using a Gas Chromatographic Method of Measurement	
<i>J. A. Boutin, G. Siest, A. M. Batt, E. Solheim, and R. R. Scheline</i>	201
Preparation and Properties of Calcium-Dependent Resins with Increased Selectivity for Calmodulin	
<i>Russell C. Hart, Rita E. Hice, Harry Charbonneau, Cindy Putnam-Evans, and Milton J. Cormier</i>	208
Functional Heterogeneity of Monoclonal Antibodies Obtained Using Different Screening Assays	
<i>Robert C. Mierendorf, Jr., and Randall L. Dimond</i>	221
A Simple Technique for the Preparation and Storage of Sucrose Gradients	
<i>Dawn S. Luthe</i>	230
Inorganic Phosphate Determination in the Presence of a Labile Organic Phosphate: Assay for Carbamyl Phosphate/Phosphatase Activity	
<i>Michael J. Black and Mary Ellen Jones</i>	233
High-Performance Liquid Chromatography of Phospholipids: Quantitation by Phosphate Analysis	
<i>John R. Yandrasitz, Gerard Berry, and Stanton Segal</i>	239

An Automated Method for the Determination of Biogenic Amines and Their Metabolites by High-Performance Liquid Chromatography	<i>Walter A. Hunt and Thomas K. Dalton</i>	269
Enhanced Detection of Viroid-RNA after Selective Divalent Cation Fractionation	<i>J. S. Semancik and Judy Szychowski</i>	275
Superoxide Dismutase Assay Using Alkaline Dimethylsulfoxide as Superoxide Anion-Generating System	<i>Keith Hyland, Emmanuelle Voisin, Hélène Banoun, and Christian Auclair</i>	280
A Two-Dimensional Electrophoretic Technique for the Detection of Circular Viroids and Virusoids	<i>Jürgen Schumacher, John W. Randles, and Detlev Riesner</i>	288
High-Performance Liquid Chromatographic Analysis on Radial Compression Column of the Neurotoxic Tri- <i>o</i> -cresyl Phosphate and Metabolites	<i>Amin A. Nomeir and Mohamed B. Abou-Donia</i>	296
The Application of Rate Dialysis to the Determination of Free Steroids in Plasma	<i>David L. Willcox, Susan C. McColm, Peter G. Arthur, and John L. Yovich</i>	304
Determination of Pipecolic Acid in Rat Brain Areas by High-Performance Liquid Chromatography of Dansyl Derivatives with Fluorimetric Detection	<i>Hiroaki Nishio and Tomio Segawa</i>	312
Improved Conditions for Activity Gel Analysis of DNA Polymerase Catalytic Polypeptides	<i>Essam Karawya, Judith A. Swack, and Samuel H. Wilson</i>	318
Measurement of 3-Methoxy-4-hydroxyphenylacetic Acid (HVA) in Plasma by High-Performance Liquid Chromatography with Electrochemical Detector (HPLC-EC)	<i>J. I. Javaid, T. S. Liu, J. W. Maas, and J. M. Davis</i>	326
An Affinity Ligand for Phospholipase A ₂ Purification	<i>S. Tahir and R. C. Hider</i>	332
The Spectrophotometric Determination of Micromolar Concentrations of Co ²⁺ Using <i>o</i> -Phenanthroline	<i>Christopher H. Evans</i>	335
Separation of Proteins by High-Performance Anion-Exchange Chromatography	<i>Michael Flashner, Hugh Ramsden, and Laura J. Crane</i>	340
A Simple and Rapid Procedure for the Purification of Plasmid DNA Using Reverse-Phase C18 Silica Beads	<i>R. B. Sparks and J. H. Elder</i>	345
Estimation of Ursodeoxycholic Acid in Human and Bear Biles Using <i>Clostridium absonum</i> 7 β -Hydroxysteroid Dehydrogenase	<i>Ian A. MacDonald,</i> <i>C. Noel Williams, J. Derek Sutherland, and A. Carl MacDonald</i>	349
A Micromethod for the Quantitation of Cellular Proteins in Percoll with the Coomassie Brilliant Blue Dye-Binding Assay	<i>Renaud Vincent and Denis Nadeau</i>	355
Thin-Layer Fluorescence Cell for Ligand Binding Studies	<i>Heinz Decker, Brough Richey, Robert C. Lawson, and Stanley J. Gill</i>	363
A Rapid Assay for Protein Kinases Phosphorylating Small Polypeptides and Other Substrates	<i>S. Braun, M. Abdel Ghany, and E. Racker</i>	369
Nonlinear Gel Electrophoresis: An Analogy with Ideal Fluid Flow	<i>C. Dennison, Anne M. Phillips, and Jennifer M. Nevin</i>	379
The Use of Amphotericin B to Detect Inhibitors of Cellular Cholesterol Biosynthesis	<i>Monty Krieger</i>	383

Immobilization of Proteins on Partially Hydrolyzed Agarose Beads	<i>N. L. Stults, P. Lin, M. Hardy, Y. C. Lee, Y. Uchida, Y. Tsukada, and T. Sugimori</i>	392
Characterization of Messenger RNA by Direct Translation from Agarose Gels	<i>Terrie L. Brandt and Perry B. Hackett</i>	401
Silver Stain for Detecting 10-Femtogram Quantities of Protein after Polyacrylamide Gel Electrophoresis	<i>Kazuaki Ohsawa and Nobuyosi Ebata</i>	409
Isolation of DNA from Filamentous Fungi and Separation into Nuclear, Mitochondrial, Ribosomal, and Plasmid Components	<i>Robert C. Garber and O. C. Yoder</i>	416
Detection of Enzymatic Activities in Sodium Dodecyl Sulfate-Polyacrylamide Gels: DNA Polymerases as Model Enzymes	<i>A. Blank, John R. Silber, Michael P. Thelen, and Charles A. Dekker</i>	423
Assay of UDP, GDP, CDP, and ADP Reductase Activities by Column Chromatography on Polyethyleneimine Cellulose	<i>Atsushi Sato, Alfred E. Fleischer, and Joseph G. Cory</i>	431
Enzymatic Preparation of Radiolabeled Succinic Semialdehyde	<i>Kenneth M. Gibson and Lawrence Sweetman</i>	436
The Determination of Chlorophylls <i>a</i> and <i>b</i> Together with $^{14}\text{CO}_2$ Fixation in the Same Plant Tissue Samples	<i>Efraim Lewinsohn and Jonathan Gressel</i>	438
Determination of the Specific Activity of NaB^3H_4	<i>Martha H. Murtiashaw, Suzanne R. Thorpe, and John W. Baynes</i>	443
Detection of Phospholipid Biosynthetic Enzyme Activities in <i>Saccharomyces cerevisiae</i> by Colony Autoradiography	<i>Michael J. Homann and George M. Carman</i>	447
The Use of a Zwitterionic Detergent in Two-Dimensional Gel Electrophoresis of Trout Liver Microsomes	<i>Gary H. Perdew, Henry W. Schaup, and Daniel P. Selivonchick</i>	453
Use of T4 DNA Polymerase Replacement Synthesis for Specific Labeling of Plasmid-Cloned Inserts	<i>Keith C. Deen, Terry A. Landers, and Mark Berninger</i>	456
A Quantitative Assay for Ciliate Chemotaxis	<i>Vagn Leick and Jannie Helle</i>	466
Protein Contaminants of Sodium Dodecyl Sulfate-Polyacrylamide Gels	<i>Denise Ochs</i>	470
A Filtration Method for Measuring Cellular Uptake of $[\text{}^{14}\text{C}]$ Methylamine and Other Highly Permeant Solutes	<i>A. Jayakumar and Eugene M. Barnes, Jr.</i>	475
A Radiochemical Assay for Argininosuccinate Synthetase with $[\text{U-}^{14}\text{C}]$ Aspartate	<i>Sarah Ratner</i>	479
Preparative Isolation of Distinct Molecular Forms of Rabbit Liver Ferritin Using High-Performance Liquid Chromatography	<i>Erik J. Frenkel, Bep van den Beld, Boudy W. König, and Joannes J. M. Marx</i>	489
Factors Affecting the Stability of Fluorescent Isoindoles Derived from Reaction of <i>o</i> -Phthalaldehyde and Hydroxyalkylthiols with Primary Amines	<i>J. F. Stobaugh, A. J. Repta, L. A. Sternson, and K. W. Garren</i>	495

INFORMATION FOR AUTHORS¹

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell and tissue culture techniques that are of general application.
- Sequencing and synthesis of nucleic acids; chemical mutagenesis.
- Purification methods for enzymes and other proteins when a high level of purity has been achieved.
- Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that have a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1983 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

¹ An extended Information for Authors was published in the July 1, 1983 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ inches (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1980. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125**, 255–260.
2. Metzler, D. E. (1977) *Biochemistry: The Chemical Reaction of Living Cells*, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) in *The Proteins* (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
